Continuation of 5. does NOT place the application in condition for allowance because: of the reasons set forth in the final rejection, and the arguments presented are directed towards the unentered amendment. Additionally, Applicants argue that Vaeth's system produces commercial coatings that are found to deposit anisotropically, and that the Applicant's invention results in polymer films with uniform thickness along the entire film. The claims presented recite an anisotropic distribution on the surface of the substrate. Furthermore, Kimoto is depended upon to provide the teaching of the formation of a polymeric coating of uniform thickness.
